🥈 SERVICE 2: Phishing Campaign Simulation (Simple Version)

This is manual but VERY sellable.

🎯 What You're Selling

You:

- send fake phishing email
- track who clicks
- report results
- give training advice

⚠️ IMPORTANT RULE

ONLY do this if:
👉 client gives written permission
👉 they provide employee emails

Never send unsolicited emails.

🧱 PART 1: Set Up Tools (All Free)

You will use:

- Gmail
- Google Sheets
- Bitly (free link tracker)

📊 PART 2: Create Tracking Sheet

Open Google Sheets → name:

👉 **Phishing Campaign Tracker**

Create columns:

Email | Sent (Yes/No) | Clicked (Yes/No) | Notes

🔗 PART 3: Create Trackable Link

Go to Bitly (free account)

Create link like:

https://example.com/security-awareness

Bitly gives:
👉 shortened link
👉 click tracking

✉️ PART 4: Create Phishing Email Template

Use this:

📧 EMAIL TEMPLATE

Subject:
👉 “Important: Password Reset Required”

Body:

Hello,

We detected unusual activity on your account.

Please reset your password immediately using the link below:

[INSERT BITLY LINK]

Failure to act may result in temporary suspension.

Thank you,
IT Support

📤 PART 5: Send Emails

Step 1

Client gives list of emails

Step 2

Paste into your Google Sheet

Step 3

Send emails (copy/paste)

👉 Use BCC for small groups

📈 PART 6: Track Results

After 24–72 hours:

Go to Bitly:

- see number of clicks

Update your sheet:

- mark “Clicked” if applicable

🧾 PART 7: Create Report (Use Claude Again)

Paste this into Claude:

Create a phishing simulation report.

Data:
- Total users: [X]
- Clicked link: [X]
- Did not click: [X]

Include:
1. Executive summary
2. Risk level
3. Employee awareness assessment
4. Recommendations for training

Keep it professional and simple.

📄 PART 8: Deliver Report

Use SAME template as Service 1

Add:

- click rate
- risk explanation

💰 Pricing (Fiverr)

Security Report

- $29 / $79 / $149

Phishing Simulation

- $50 / $150 / $300+

🚨 The Real Risk (What could go wrong)

Yes — you *could* violate confidentiality if you:

- upload sensitive logs with **real customer data**
- expose **employee emails or internal systems**
- store files in unsecured places
- reuse or share client data

Examples of sensitive data:

- employee emails
- IP addresses tied to internal systems
- login attempts / credentials
- internal server names

👉 That's why you need a **simple but solid process**

✅ The SAFE Way to Do This (What professionals do)

1. Always get permission (non-negotiable)

Before starting, send this message:

Message

Before proceeding, please confirm that you have authorization to share these logs or email lists for analysis and testing purposes. I will handle all data confidentially and use it only for this project.

👉 This protects you immediately

---

2. Ask for “sanitized” data (BEST PRACTICE)

Tell clients:

Message

If possible, please remove or anonymize sensitive information such as full names, emails, or internal identifiers before sharing.

👉 Many companies already do this

---

3. Never store data long-term

Your rule:

- Download → analyze → deliver → **delete**

👉 Don’t build a database of client data

---

4. Use secure tools only

Safe:

- Google Drive (private)
- Claude (used carefully)
- local files

Avoid:

- random free tools
- public links
- sharing screenshots with data visible

---

5. Don’t expose real data in your portfolio

❌ NEVER show:

- real logs
- real emails
- real company names

✅ Instead:

- use **fake/sample data**
- recreate examples

⚠️ VERY IMPORTANT: Using Claude Safely

When you paste logs into Anthropic Claude:

👉 You should **avoid sensitive personal data**

Best approach:

- remove emails
- remove names
- keep patterns (IPs, event types)

Example:

Instead of:

john.smith@company.com failed login

Use:

user_01 failed login

🧾 For Phishing Simulations (More Sensitive)

This is where you need to be extra careful.

MUST DO:

✅ Get written approval

- “Yes, you can send emails to employees”

✅ Only use provided list

- never guess or scrape emails

✅ Limit scope

- small test groups (10–50 users)

✅ Be transparent after test

- results are shared with company only

🛡️ SIMPLE PROTECTION YOU SHOULD ADD

Add this to your Fiverr gig:

Writing

IMPORTANT:
All data provided will be treated as confidential and used solely for the purpose of this project.
Clients are responsible for ensuring they have authorization to share any data submitted.

💡 REALITY CHECK (Industry Perspective)

What you’re doing is basically:

- log analysis → SOC work

- reporting → GRC work
- phishing simulation → security awareness

👉 Companies PAY consultants to do this every day

The difference is:

- they use contracts
- you use **simple Fiverr protections**

🧠 Smart Beginner Strategy (RECOMMENDED)

Start with:

🟢 Low-risk jobs first

- sample logs
- non-sensitive data
- basic reports

Then move to:

- real clients
- more advanced work

🔥 Golden Rules (Follow These Always)

1. Always get permission
2. Prefer sanitized data
3. Don’t store data long-term
4. Don’t share client data
5. Use fake data for demos
6. Be transparent

⚡ Bottom Line

👉 Yes, it *can* break confidentiality
👉 But if you follow the steps above, you are operating **professionally and safely**

🚀 If you want next step

I can:

- write a **simple NDA-style agreement** you can send clients
- create a **safe workflow checklist you follow every time**
- help you position this as **professional consulting work**

Just say:

👉 “Give me NDA and safety checklist”

🧾 SIMPLE NDA YOU CAN USE (Copy/Paste)

You can send this in Fiverr chat or as a PDF:

Writing

CONFIDENTIALITY AGREEMENT (SIMPLIFIED)

This agreement is between:

Client: _____
Service Provider: [Your Name]

Purpose:
The Service Provider will perform cybersecurity analysis and/or phishing simulation services.

Confidentiality:
All information, data, files, and materials provided by the Client will be treated as confidential and used solely for the purpose of completing the requested services.

Data Handling:

- Data will not be shared with third parties
- Data will not be reused or stored after project completion
- Data will be deleted upon completion unless otherwise agreed

Client Responsibility:
The Client confirms they have authorization to share the provided data and approve its use for testing and analysis.

Limitation:
The Service Provider provides analysis and recommendations only and does not guarantee prevention of security incidents.

Agreed by:

Client Signature: _____
Date: _____

👉 This is enough for Fiverr-level work

🛡️ YOUR SAFE WORKFLOW CHECKLIST (USE EVERY TIME)

This is your **“no mistakes” system** — follow this exactly.

🔹 STEP 1: Before Accepting Order

Ask this:

Message

Before proceeding, please confirm you are authorized to share this data and approve its use for analysis/testing.

✅ If they say yes → proceed
❌ If unclear → do NOT continue

🔹 STEP 2: Request Safer Data

Message

If possible, please remove or anonymize sensitive information such as full names, emails, or internal system identifiers before sharing.

👉 This reduces your risk immediately

🔹 STEP 3: Store Files Safely

DO:

- download to your computer OR private Google Drive folder

DO NOT:

- leave files in email long-term
- upload to random tools
- share links publicly

🔹 STEP 4: Sanitize BEFORE Using AI

Before pasting into Claude:

Remove:

- real emails
- names
- company identifiers

Example:

❌

john.smith@company.com failed login

✅

user_01 failed login

🔹 STEP 5: Analyze Data

Use Claude:

- generate report
- do NOT add fake details
- keep it realistic

🔹 STEP 6: Build Report

Use:

- your template
- clean formatting
- no raw sensitive data

🔹 STEP 7: Deliver Safely

Send:

- PDF only
- no raw logs unless requested

🔹 STEP 8: DELETE DATA (CRITICAL)

After delivery:

👉 delete:

- downloaded files
- temp copies
- desktop versions

👉 empty recycle bin

🔹 STEP 9: Never Reuse Data

❌ NEVER:

- reuse logs for examples
- show in portfolio
- share screenshots

🔹 STEP 10: Portfolio Safety

ONLY use:

- fake data
- recreated examples

⚠️ Special Rules for Phishing Simulation

These are stricter:

MUST DO:

✔ Written approval
✔ Only use provided email list
✔ Limit number of users
✔ Do NOT impersonate real companies (Google, banks, etc.)
